# Jana Walid El-Eskandrany

**Junior Machine Learning Engineer**
+201093531565 | janawalideleskandrany@gmail.com
LinkedIn: Jana El eskandrany |GitHub: janawalid

## Career Objective

A dedicated AI student and hybrid engineer, proficient in embedded systems (ATmega32, Embedded C) and currently advancing my expertise in Machine Learning and MLOps. I bring a unique fusion of hardware and software expertise to **design and build intelligent edge devices**, with specialized focus on **Edge AI and TinyML applications**.

## EDUCATION

Bachelor of Computer Science from Damietta University 2023-2027

- Major: Artificial Intelligence
- General Grade: Excellent

## EXPERIENCE

**Robotics Teaching Assistant | RoboLeap Academy** **Jan 2026 - Present**

- Teach hands-on electronics & robotics to students (10–16) using sensors, motors, and microcontrollers
- Lead introductory Python programming classes focused on robotics applications
- Coach a 4-student competition team in strategy, circuit design, and debugging
- Simplify complex technical concepts for beginners using demos and analogies
- Adapt curriculum materials to accommodate different learning paces
- Supervise lab safety and provide real-time troubleshooting during workshops

**Machine Learning Trainee | Digital Egypt Pioneers Initiative** **Nov 2025 – Present**

- Intensive training in production ML using Microsoft Azure
- Building end-to-end ML pipelines from raw data to deployment
- Developing algorithms for pattern recognition and automation
- Technologies: Python, Azure AI, Deep Learning, NLP, Computer Vision

## Courses

**Introduction to the Internet of Things - IoT Value Chain** **August 2025**
Mahara-Tech ITI Platform

- Mastered IoT building blocks, value chain components, and system architecture
- Evaluated wireless technologies, carrier networks, and smart device requirements
- Analyzed IoT Application Enablement Platforms (AEP) including Master of Things platform
- Explored IoT/M2M development challenges and implementation strategies
- Studied real-world IoT use cases across industries for practical solution design

**IoT Application Development Course** **September 2025**
Mahara-Tech ITI Platform

- Gained foundational knowledge of IoT architecture and Application Enablement Platforms (AEP)
- Learned to acquire sensor data using multiple protocols and define real-time triggers/actions
- Developed customized dashboards to visualize IoT device data in real-time
- Built IoT monitoring applications with role-based access control for different user types
- Implemented practical projects including a baby monitor system with sensor data acquisition

# TECHNICAL SKILLS

**Programming:**

- Python, Embedded C/C++

**Machine Learning**:

- Scikit-learn, TensorFlow, Azure AI, MLOps

**Embedded Systems**:

- ATmega32, Sensor Integration, Robotics Tools: Microsoft Azure, MLflow, Git

**Other Skills:**

- Problem Solving, Technical Communication, Team Leadership

# Languages

- Arabic (Native)
- English (B2)

# PROJECTS

Smart Parking System - Embedded ATmega32 Project

- Built complete embedded system with IR sensors, DC motor, 7-segment display
- Implemented parking slot management logic in Embedded C
- Modular HAL/MCAL architecture with real-time feedback system
